“Architecting Autonomous AI to Personalize Global Education and Opportunity.”

EDUCATION

Comsats University Islamabad Wah Campus, Pakistan.	June 2026
Bachelors in computer science	
Cannt Public School & College Wah Cannt, Pakistan.	April 2022
Intermediate (HSSC), Computer Science	
Cannt Public School & College Wah Cannt, Pakistan.	March 2020
Matric (SSC), Computer Science	

TECHNICAL SKILLS

Python, Java (Spring Boot), JavaScript (React, Angular), C/C++, SQL (MySQL), Node.js, Machine Learning & NLP (TensorFlow, PyTorch, LangChain, Hugging Face), Data Science (Pandas, NumPy, OpenCV), DevOps & Automation (Docker, Git/GitHub, n8n, Zapier, Linux)

EXPERIENCE

AI Automation Intern Comsats Wah	August 2025 – October 2025
Developed AI-driven automation workflows (n8n, Zapier, Webhook integrations) to streamline lead generation, CRM updates, and prospect qualification, reducing manual effort and boosting operational efficiency.	
AI Development Intern Capreg Soft	June 2025 – August 2025
Designed end-to-end AI solutions using LangChain and LangGraph, building agentic workflows for intelligent decision-making, multi-step task orchestration, and complex business logic execution.	
Frontend Development Intern Plan D. Studios	June 2024 – August 2024
Developed cross-browser web applications and landing pages (HTML, CSS, JS, Bootstrap), collaborating with the team to translate mockups into responsive, user-friendly interfaces.	

ACADEMIC PROJECT

DeepHunt AI FYP
Engineered a cloud-ready, multi-agent AI platform using LangChain, FastAPI, and Next.js to automate career discovery. The system autonomously scrapes global opportunities via agent pipelines, matches users through an LLM-powered semantic search engine (pgvector), and features a Smart Assistant to auto-generate tailored resumes and cover letters.
4-Phase C++ Logic Compiler Python
Engineered a web-based C++ compiler in Python and Flask with real-time execution, implementing full lexical, syntax, and semantic analysis alongside code generation.
Smart Traffic Monitoring System Python
Engineered an intelligent traffic monitoring and adaptive signal simulation (Pygame), leveraging computer vision and NMS for precise real-time vehicle detection.
Facial Attendance System Python
Engineered an AI-driven facial recognition attendance system utilizing machine learning and SVM classification, incorporating automated duplicate prevention for optimized accuracy.
Movie Recommendation System C++
Engineered a personalized movie recommendation system featuring secure user authentication, subscription management, and tailored content delivery algorithms.
